

MIS 3080: Applied Machine Learning

Covers use of machine learning algorithms in business decision making and ethical challenges. Involves data preparation & pre-processing, coding and implementation of ML models including regression, forests, nearest neighbor dimensionality reduction along with deeper learning models such as neural networks.

Credits: 3.0

Prerequisites:

VSB 2006

MIS 2020

VSB 2006 and MIS 2020

Program: Management Information Systems
