

BIO 3615: Biomechanics

Biomechanics is the study of how the form and activities of organisms reflect physical environmental parameters such as flow, available materials, and forces. Students will learn key concepts, current directions in the field, real-world applications, and how to conduct experiments.

Credits: 4.0

Prerequisites:

BIO 2105

BIO 2106

BIO 2105 and BIO 2106

Program: [Biology](#)
